GOAL SCORING

This assessment process is based on the best practices of the OH+ methodology. It is intended to improve the effectiveness of the mission's goals and objectives. The goal scoring process engages a decision-maker to rate the performance of the goals. The goal scores are then fed into the model for the future scenario.

CURRENT STATUS

The current status reflects the performance of the mission. It is based on the current score achieved by the team. The current status is used to determine the target score for the future.

FUTURE STATUS

The future status reflects the expected performance of the mission. It is based on the expected score achieved by the team. The future status is used to determine the target score for the future.

PRESSURES

Pressure is a term used to describe the forces that act upon the mission. They can be internal or external. The pressure is used to determine the impact of the forces on the mission.

RESILIENCE

Resilience is a term used to describe the ability of the mission to adapt to changes. It is based on the ability of the mission to absorb the pressure and continue to function.

FACTORS

Factors are terms used to describe the elements that influence the mission. They can be internal or external. The factors are used to determine the impact of the elements on the mission.

PROJECT

The project represents the mission's goal. It is based on the project's score achieved by the team. The project is used to determine the target score for the future.

OHI+

This assessment process is based on the best practices of the OH+ methodology. It is intended to improve the effectiveness of the mission's goals and objectives. The goal scoring process engages a decision-maker to rate the performance of the goals. The goal scores are then fed into the model for the future scenario.

CURRENT STATUS

The current status reflects the performance of the mission. It is based on the current score achieved by the team. The current status is used to determine the target score for the future.

FUTURE STATUS

The future status reflects the expected performance of the mission. It is based on the expected score achieved by the team. The future status is used to determine the target score for the future.

PRESSURES

Pressure is a term used to describe the forces that act upon the mission. They can be internal or external. The pressure is used to determine the impact of the forces on the mission.

RESILIENCE

Resilience is a term used to describe the ability of the mission to adapt to changes. It is based on the ability of the mission to absorb the pressure and continue to function.

FACTORS

Factors are terms used to describe the elements that influence the mission. They can be internal or external. The factors are used to determine the impact of the elements on the mission.

PROJECT

The project represents the mission's goal. It is based on the project's score achieved by the team. The project is used to determine the target score for the future.

OBJECTIVE

The objective represents the mission's goal. It is based on the objective's score achieved by the team. The objective is used to determine the target score for the future.

METRIC

The metric represents the mission's goal. It is based on the metric's score achieved by the team. The metric is used to determine the target score for the future.

KPI

The KPI represents the mission's goal. It is based on the KPI's score achieved by the team. The KPI is used to determine the target score for the future.

PI

The PI represents the mission's goal. It is based on the PI's score achieved by the team. The PI is used to determine the target score for the future.

SMART

The SMART represents the mission's goal. It is based on the SMART's score achieved by the team. The SMART is used to determine the target score for the future.

TACTIC

The tactic represents the mission's goal. It is based on the tactic's score achieved by the team. The tactic is used to determine the target score for the future.

WIN

The win represents the mission's goal. It is based on the win's score achieved by the team. The win is used to determine the target score for the future.
