THE CONVENTION ON BIOLOGICAL DIVERSITY (CBD)

REFERENCES

The Convention on Biological Diversity (CBD) is an international treaty designed to safeguard the world's biological diversity through its conservation, sustainable use, and equitable sharing of genetic resources. It entered into force in 1993 and has 196 Parties to date. The objective of the CBD is to ensure the conservation and sustainable utilization of biological diversity in a manner that would fulfill the needs of present and future generations. The convention is implemented through national and international actions, as well as through the provision of financial and technical support.
