**WHY CONDUCT AN OHI+ ASSESSMENT?**

Conducting an assessment is an essential step in understanding the health of your site. The process involves evaluating the physical, chemical, and biological parameters of the site to identify potential areas for improvement. Here’s why you might consider conducting an OHI+ assessment:

1. **Assessment Objectives**: Identify the specific goals of the assessment, such as increasing bioluminescent activity, improving water quality, or enhancing biodiversity.
2. **Data Collection**: Gather comprehensive data on various parameters including water quality, bioluminescence, and biological indicators.
3. **Analysis and Interpretation**: Analyze the collected data to understand the site's health status and identify any areas of concern.
4. **Action Plan Development**: Develop a plan of action based on the findings, including recommendations for improvements.
5. **Monitoring and Reporting**: Establish a monitoring program to track progress and report on the effectiveness of the implemented strategies.

OHI+ is a valuable resource for those interested in marine health. The website offers a wealth of information, tools, and resources to help you conduct assessments, interpret results, and understand the state of marine health. Whether you're a scientist, educator, or marine conservationist, OHI+ provides the tools you need to make informed decisions and take action to protect our oceans.
